

# To write a PL/SQL program to find area of circle and square

## Program:

```
declare
    radius number;
    side number;
    square number;
    circle number;
begin
    radius := &radius;
    side := &side;
    square := side * side ;
    circle := 3.14 * radius * radius;
    dbms_output.put_line('Area of Circle is: ' || circle);
    dbms_output.put_line('Area of Square is: ' || square);
end;
/
```

## Output:

```
SQL> /
Enter value for radius: 4
old 7:      radius := &radius;
new 7:      radius := 4;
Enter value for side: 4
old 8:      side := &side;
new 8:      side := 4;
Area of Circle is: 50.24
Area of Square is: 16

PL/SQL procedure successfully completed.
