Write a function to find sum of first N even no:s

Program:

Function Body

```
create or replace function sumnum(n number)
return number is
      t number;
      j number;
      begin
            t := 0;
            for i in 1..n
            loop
                  j := mod(i,2);
                  if j = 0
                  then
                        t := t + i;
                  end if;
            end loop;
            return t;
            end;
```

Output:

```
Function created.

SQL> select sumnum(10) from dual;

SUMNUM(10)
----------
       30
```
